The learning you've made in class today certainly won't evaporate.

Where in the classroom might we see evidence of condensation? Show me and explain.

You're showing good understanding of both evaporation and condensation.

What causes water vapour to condense? Explain.

Understanding evaporation and condensation will now help you make links to geography.

How does evaporation and condensation fit in the water cycle? Can you explain?

The learning you've made in class today certainly won't evaporate.

Where in the classroom might we see evidence of condensation? Show me and explain.

You're showing good understanding of both evaporation and condensation.

What causes water vapour to condense? Explain.

Understanding evaporation and condensation will now help you make links to geography.

How does evaporation and condensation fit in the water cycle? Can you explain?

The learning you've made in class today certainly won't evaporate.

Where in the classroom might we see evidence of condensation? Show me and explain.

You're showing good understanding of both evaporation and condensation.

What causes water vapour to condense? Explain.

Understanding evaporation and condensation will now help you make links to geography.

How does evaporation and condensation fit in the water cycle? Can you explain?

The learning you've made in class today certainly won't evaporate.

Where in the classroom might we see evidence of condensation? Show me and explain.

You're showing good understanding of both evaporation and condensation.

What causes water vapour to condense? Explain.

Understanding evaporation and condensation will now help you make links to geography.

How does evaporation and condensation fit in the water cycle? Can you explain?

The learning you've made in class today certainly won't evaporate.
